

Northwest Expansion Project Overview

AES Indiana is investing in the electric transmission system to help improve reliability, meet increased demand and provide operational flexibility for all customers within and surrounding AES Indiana's territory. The improvement project involves building approximately 11 miles of new transmission lines, rebuilding two miles of existing transmission lines and a new substation.

What

The project includes:

- One new substation (Maloney)
- Building a new 138-kilovolt (kV) transmission line (11 miles total)
- Rebuilding 2 miles of existing 138kV transmission line

Why

Rapid commercial and residential growth in AES Indiana's NW quadrant is exerting increased pressure on the Rockville Road Substation. Additionally, AES Indiana has received a request from Wabash Valley Power Alliance (WVPA) to prepare Hendricks County for ongoing growth and expansion in the area due to the expansion of the Ronald Reagan Expressway. In response to these needs, we are initiating the construction of a new transmission line and substation. The primary objective is to ensure a stable power supply, alleviate stress on the current substation and serve as a pivotal delivery point for WVPA/Hendricks County Power Cooperative to meet the surging energy demands in Hendricks County. Our commitment is to deliver sustainable, reliable power solutions, thereby enhancing grid reliability and facilitating regional growth.

Where

- Marion County
- Hendricks County
- Town of Brownsburg
- City of Indianapolis
- Brown Township
- Lincoln Township
- Washington Township
