

# AES Indiana 138kV Typical Structure Comparison

Structures are for visual representation purposes only and are not drawn to scale.  
Structure heights, widths and configurations will vary depending on terrain and other engineering factors.

**Direct Embed Ductile Iron Horizontal Post**  
Typically used for straight in-line structures and light angles.

**Self-Supporting Steel Corner**  
Typically used for heavy angles, major road/highway crossings, long spans, and switch structures.
