

The IRP is a 20-year plan that helps define the future of energy in Central Indiana. AES Indiana submits an IRP to the Indiana Utility Regulatory Commission (IURC) every three years. The IRP identifies a generation portfolio that provides safe, reliable and affordable energy to our more than 530,000 customers. The plan will consider potential risks, explore multiple options and consider key stakeholder and public input. By taking a 20-year look at its resource portfolio, AES Indiana can account for all factors to determine reasonable least-cost options for energy storage and generation.

## 2025 IRP Timeline

## Public Advisory Meeting Topics

AES Indiana will host five public meetings in 2025 to discuss the IRP process and solicit public input to shape scenarios, develop metrics, and clarify data.
